

Message from DG

Information and Communication Technology has become a guiding force in every sector of modern life. It has become an indispensable part of our education, health, agriculture, trade, commerce and public relation as well. Under the supervision of the Ministry of Education, a good number of projects have been under operation with a view to spreading ICT based education all over the country in all levels of education. All Government and Non-government schools and colleges are being taken under these projects by turns to ensure a congenial environment for providing ICT based education in the classroom. The aims of these projects are mainly to impart modern system of learning among students and teachers; to keep the learners upfront with the current development of e-Learning; and to develop the quality of education following the international standard.

I am extremely happy that the massive project "The Development of Selected Non-Government Colleges along with ICT Facilities for Improving Quality of Education Project" is underway to materialize the dream with its committed approach in this regard. The project is being run by a number of efficient and dedicated officers who work relentlessly for the proper implementation of the project and thus ensure the development of the quality of education in the assigned colleges. The official website for this project keeps the record of daily updates regarding the project activities. I am hopeful that this project will bring a new trend in the modern education system in Bangladesh.

I cordially wish we could work together to implement the project successfully and thus become a little part of the glorious enterprise in establishing quality education through ICT round the nation.

Prof. Dr. S M Wahiduzzaman

Director General,

Directorate of Secondary and Higher Secondary Education

Bangladesh, Dhaka
